

AdChoreo Prompt Cheat Sheet

This cheat sheet is designed to help growth managers maximize the potential of AdChoreo by providing a clear comparison between lazy and effective prompts. To get the best results from AdChoreo, it is crucial to provide elaborate and specific prompts rather than abstract ones.

Lazy vs. Good Prompts: A Comparison

The table below illustrates the difference between lazy and good prompts, demonstrating how specificity can significantly improve AdChoreo's output.

Prompt Type	Lazy Prompt Example	Good Prompt Example	Explanation
Performance Analysis	"Find the low performance ads for me and tell why."	"On Meta, for the past 7 days, analyze the key metrics (CAC) and report the top 5 ad sets that performed	A good prompt specifies the platform, timeframe, specific metric, and desired output format.

Prompt Type	Lazy Prompt Example	Good Prompt Example	Explanation
		well. Please specify the campaigns that the ad sets belong to, along with the spend and any such useful information."	
	"What is the CAC for the ads that have run from Jan to June this year"	"On Meta, what is the CAC for ads that have run in Jan 2025"	Ads are the most detailed level in Meta Ads Manager and can return large datasets, so fetch ad-level data one month at a time. Ad sets can be queried for up to 3 months, and campaigns for up to 6 months in a single query.
Campaign Overview	"Analyze All Google Ads campaigns."	"On Google Ads for June 2025 with search terms 'vegan burgers', what are the metrics (CTR) for the campaigns and what can be improved?"	A good prompt defines the platform, date range, specific search terms, and requests actionable insights.
Creative Performance	"What are the best and worst creatives?."	"On Meta for the last 7 days, give me the top 3 best performing and worst	A good prompt specifies the platform, timeframe, number of creatives, and key

Prompt Type	Lazy Prompt Example	Good Prompt Example	Explanation
		performing creatives by CAC."	performance indicator for comparison.
Creative Optimization	"Improve the ad 'Ad-abcd-1234'."	"For the ad 'Ad-abcd-1234', optimize the creative to make it more effective for the campaign; show it and provide reasons for the enhancements made."	A good prompt identifies the specific ad, the creative type, and requests justifications for proposed improvements.

Tips for Crafting Good Prompts

- **Be Specific:** Avoid vague terms. Instead of "low performance," use "low CTR" or "high CAC."
- **Provide Context:** Explain the "why" behind your request. What is the overall goal of the analysis or optimization?
- **Define Metrics:** Clearly state which metrics you want analyzed (e.g., CAC, CTR, ROAS).
- **Specify Timeframes:** Always include dates or periods (e.g., "last 7 days," "June 2025")
- **Identify Platforms:** Indicate whether the request is for Meta Ads, Google Ads, or both.
- **Iterate and Refine:** Don't hesitate to experiment with your prompts. If the first output isn't perfect, refine your prompt with more details.

By following these guidelines and thinking elaborately about your campaign needs, you can significantly improve the quality and effectiveness of the outputs generated by AdChoreo, helping you achieve your growth objectives more efficiently.
